FINDINGS/CONCLUSIONS

This traffic impact analysis (TIA) has been prepared for the proposed Village at Totem Lake development as a requirement to the SEPA Addendum issued for the Totem Lake Mall redevelopment project. This TIA is an update to the *Totem Lake Mall Redevelopment Traffic Impact Analysis* dated December 2005.

Project Proposal. The proposed Village at Totem Lake development includes 342,700 square feet (sf) shopping center use, a 50,000 sf grocery store, 1,050 apartments, and an 800 seat multiplex theatre. Vehicular access to the proposed development would be provided by three driveways on Totem Lake Blvd, five driveways on 120th Ave NE, and three driveways on Totem Lake Way. One driveway on Totem Lake Boulevard and one driveway on 120th Ave NE are proposed to be signalized with the project, and all unsignalized driveways are proposed to allow full access. The anticipated year of occupancy for the project is 2017.

Trip Generation. The proposed Village at Totem Lake development is estimated to generate 577 net new trips during the weekday AM peak hour (150 entering, 427 exiting), and 268 net new trips during the weekday PM peak hour (246 entering, 22 exiting). The current land use proposal for the Village at Totem Lake is estimated to generate 313 fewer trips (14 percent less) during the PM peak hour when compared to the PM peak hour trip generation estimate documented in the 2005 TIA, which is the trip generation that SEPA is based on.

Future Year LOS. An AM and PM peak hour LOS analysis was conducted at four study intersections for year 2017 conditions. The results of the LOS analysis showed that the signalized study intersections are estimated to operate at LOS D or better during the AM and PM peak hours in 2017 with the proposed project, except for the intersection of NE 128th St/120th Ave NE which is anticipated to operate at LOS E in 2017 during the PM peak hour with the project. Additionally, all controlled movements at the unsignalized study intersection of Totem Lake Way/120th Ave NE would operate at LOS C or better under 2017 AM and PM peak hour conditions with the proposed project.

Site Access Analysis. The two signalized site driveways are anticipated to operate at LOS A during both the AM and PM peak hour in 2017 with the proposed Village at Totem Lake project. All controlled movements at the unsignalized site driveways are expected to operate at LOS D or better during the AM and PM peak hour in 2017 with the project, with the exception of the westbound (exiting) left-thru movement at the Upper Mall Loop Road driveway on 120th Ave NE which is anticipated to operate at LOS E.

Mitigation

Concurrency. Based on correspondence with the City of Kirkland, the proposed project obtained concurrency with the 2005 Totem Lake Mall Redevelopment proposal and the concurrency is vested.

SEPA Improvements. The following improvements are proposed to be completed as part of the Village at Totem Lake project:

- Redesign 120th Ave NE along the project frontage to include on-street parking and other traffic calming measures
- Install traffic signal at Totem Lake Boulevard/Central Driveway
- Install traffic signal at 120th Ave NE/Central Driveway

In addition, it is recommended that the City consider optimizing the peak hour signal timing at the intersection of NE 128th Street/120th Ave NE to improve the operations of the intersection with the redistribution of background traffic from 120th Ave NE.

INTRODUCTION

This updated traffic impact analysis has been prepared for the proposed Village at Totem Lake development in the city of Kirkland (see **Figure 1**).

Background

A Traffic Impact Analysis (TIA) for the Totem Lake Mall Redevelopment was prepared in December 2005, and a SEPA Mitigated Determination of Nonsignificance for the Totem Lake Mall Conceptual Master Plan (CMP) was issued on January 20, 2006. The SEPA determination was based on the redevelopment project consisting of approximately 562,300 sf retail, 144,000 sf office, 216 residential units, and a 3,000 seat multiplex theatre. CenterCal Properties purchased the Totem Lake Mall property in 2015 and requested an update to the 2006 SEPA determination based on a modified CMP and a SEPA Addendum was issued for the project on February 26, 2015. This updated traffic impact study for the proposed project (now being referred to as the Village at Totem Lake) was prepared as a requirement to the SEPA Addendum.

Project Approach

Based on the SEPA Addendum and additional correspondence with the City of Kirkland Staff, the following items are addressed in this updated traffic impact analysis:

- Project description
- Existing Conditions
- Collision History
- Project Trip Generation
- Project Trip Distribution and Assignment
- Traffic volume forecasts and assumptions for year 2017 conditions with the proposed development and including the redistribution of background traffic on 120th Ave NE
- LOS analysis at four study intersections:
 1. NE 128th Street / Totem Lake Blvd
 2. Totem Lake Blvd / 120th Ave NE / I-405 NB Ramps
 3. NE 128th Street / 120th Ave NE
 4. Totem Lake Way / 120th Ave NE
- LOS analysis at site access driveways
- Mitigation

Project Description

The existing Totem Lake Mall site consists of two areas; the area between Totem Lake Blvd and 120th Ave NE is referred to as the "Lower Mall" and the area located east of 120th Ave NE is referred to as the "Upper Mall." The proposed Village at Totem Lake development includes 342,700 square

feet (sf) shopping center use, a 50,000 sf grocery store, 1,050 apartments, and an 800 seat multiplex theatre. Vehicular access to the proposed development would be provided by three driveways on Totem Lake Blvd, five driveways on 120th Ave NE, and three driveways on Totem Lake Way. One driveway on Totem Lake Boulevard and one driveway on 120th Ave NE are proposed to be signalized with the project, and all unsignalized driveways are proposed to allow full access. The anticipated year of occupancy for the project is 2017. A preliminary site plan is provided in **Figure 2**.

Figure 1: Project Site Vicinity

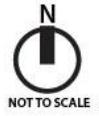

Figure 2: Preliminary Site Plan

EXISTING CONDITIONS

Existing Traffic Volumes

Year 2015 existing AM and PM peak hour traffic volumes at the four study intersections were based on counts conducted by All Traffic Data on Tuesday, September 15, 2015. The AM peak hour represents the highest one-hour time period between 7:00 and 9:00 AM at each study intersection, while the PM peak hour represents the highest one-hour time period between 4:00 and 6:00 PM. **Figure 3** illustrates the 2015 existing AM and PM peak hour traffic volumes at the study intersections.

Existing Mall Trip Generation

To determine the number of trips generated by the existing Totem Lake Mall, AM and PM peak period traffic counts were conducted by All Traffic Data at the existing driveways to the site on Tuesday, September 15, 2015. **Table 1** provides a summary of the AM and PM peak hour trip generation of the existing Totem Lake Mall. The detailed driveway count summaries are included in **Appendix A**. It should be noted that the existing Totem Lake Mall was not at full occupancy at the time of the counts.

Table 1
Totem Lake Mall Existing (2015) Trip Generation

Time Period	Gross Trips Generated ¹		
	In	Out	Total
AM Peak Hour (8:00-9:00 a.m.)	224	151	375
PM Peak Hour (4:15-5:15 p.m.)	673	731	1,404

1) Based on counts conducted at the existing Totem Lake Mall driveways on Tuesday, 9/15/15.

As shown in **Table 1**, the existing Totem Lake Mall generates a total of 375 trips (224 in, 151 out) during the AM peak hour and a total of 1,404 trips (673 in, 731 out) during the PM peak hour.

Level of Service

A level of service (LOS) analysis was conducted at the following four study intersections for 2015 existing AM and PM peak hour conditions:

1. NE 128th Street / Totem Lake Blvd
2. Totem Lake Blvd / 120th Ave NE / I-405 NB Ramps
3. NE 128th Street / 120th Ave NE
4. Totem Lake Way / 120th Ave NE

LOS generally refers to the degree of congestion on a roadway or intersection. It is a measure of vehicle operating speed, travel time, travel delays, and driving comfort. A letter scale from A to F generally describes intersection LOS. At signalized intersections, LOS A represents free-flow conditions (motorists experience little or no delays), and LOS F represents forced-flow conditions where motorists experience an average delay in excess of 80 seconds per vehicle.

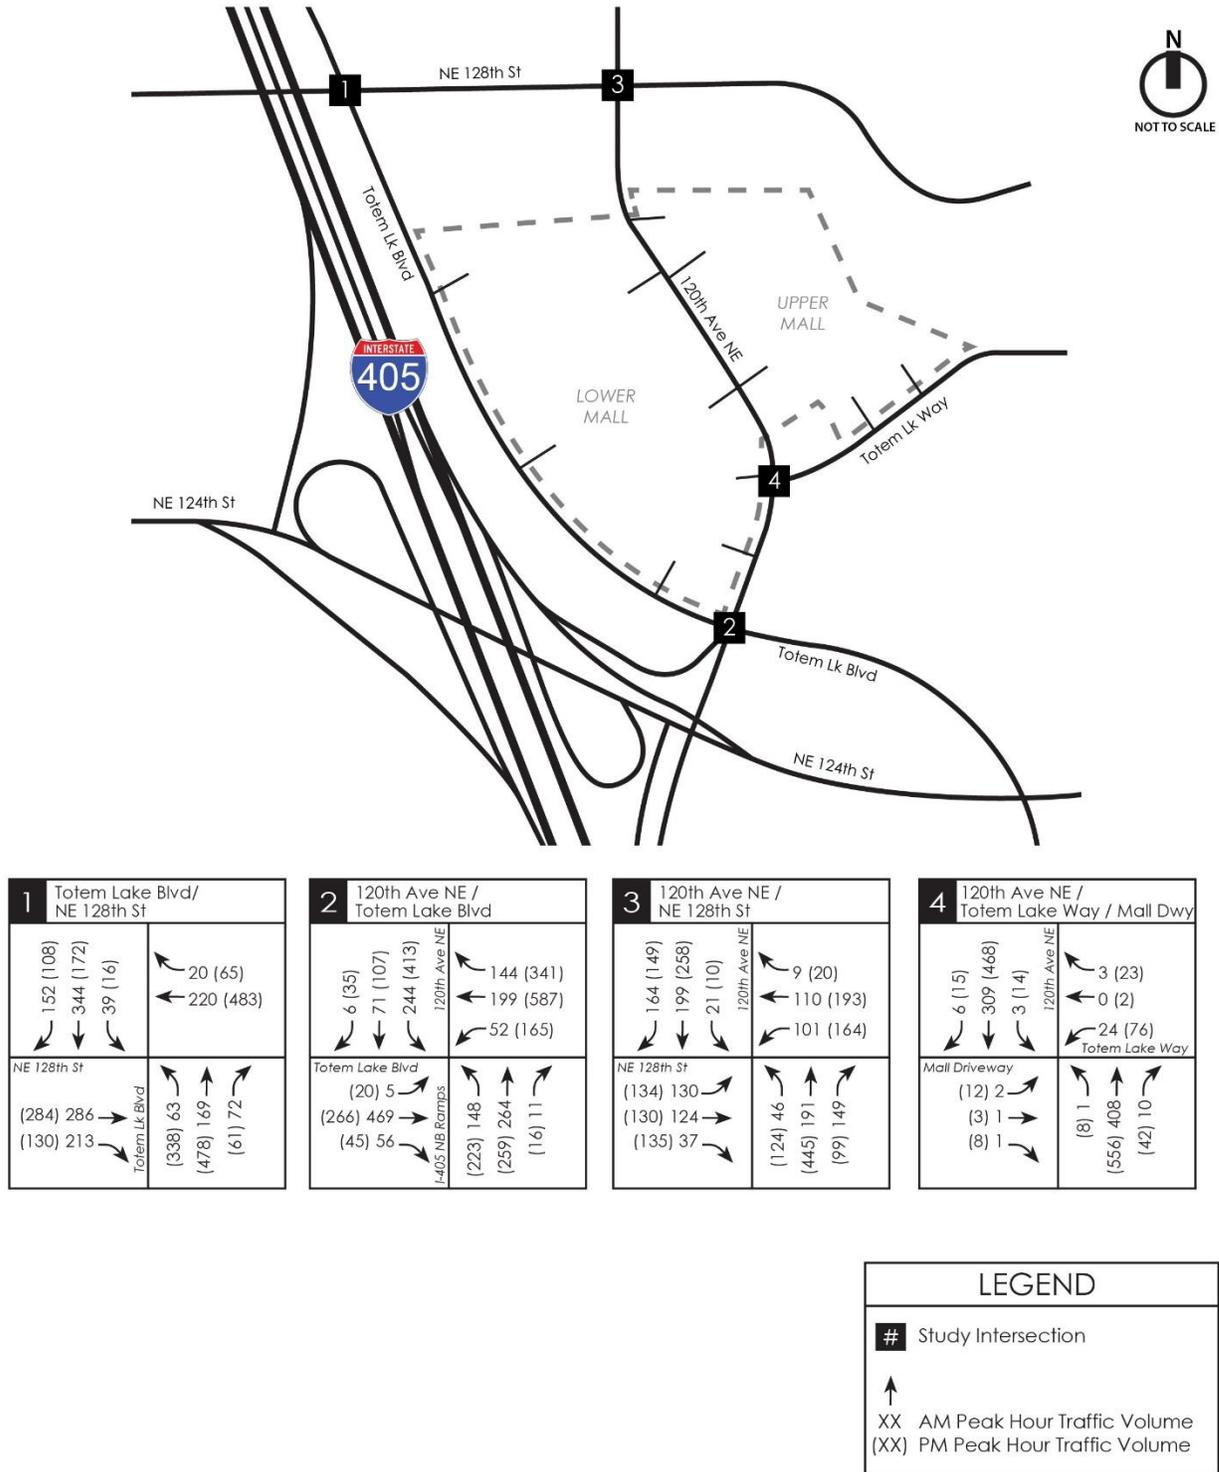

Figure 3: Year 2015 Existing Peak Hour Traffic Volumes

The LOS reported for signalized intersections represents the average control delay (sec/veh) and can be reported for the overall intersection, for each approach, and for each lane group (additional v/c ratio criteria apply to lane group LOS only).

The LOS reported at stop-controlled intersections is based on the average control delay and can be reported for each controlled minor approach, controlled minor lane group, and controlled major-street movement (and for the overall intersection at all-way stop controlled intersections. Additional v/c ratio criteria apply to lane group or movement LOS only).

Table 2 outlines the current HCM 2010 LOS criteria for signalized and stop-controlled intersections based on these methodologies.

Table 2
LOS Criteria for Signalized and Stop-Controlled Intersections¹

SIGNALIZED INTERSECTIONS			STOP-CONTROLLED INTERSECTIONS		
Control Delay (sec/veh)	LOS by Volume-to Capacity (V/C) Ratio ²		Control Delay (sec/veh)	LOS by Volume-to Capacity (V/C) Ratio ³	
	≤ 1.0	> 1.0		≤ 1.0	> 1.0
≤ 10	A	F	≤ 10	A	F
> 10 to ≤ 20	B	F	> 10 to ≤ 15	B	F
> 20 to ≤ 35	C	F	> 15 to ≤ 25	C	F
> 35 to ≤ 55	D	F	> 25 to ≤ 35	D	F
> 55 to ≤ 80	E	F	> 35 to ≤ 50	E	F
> 80	F	F	> 50	F	F

1) Source: HCM2010 Highway Capacity Manual, Transportation Research Board, 2010.

2) For approach-based and intersection-wide assessments at signals, LOS is defined solely by control delay.

3) For two-way stop controlled intersections, the LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection as a whole at two-way stop controlled intersections. For approach-based and intersection-wide assessments at all-way stop controlled intersections, LOS is solely defined by control delay.

Level of service calculations for intersections were based on methodology and procedures outlined in the 2010 update of the *Highway Capacity Manual*, Transportation Research Board (HCM 2010) using *Synchro 8.0* traffic analysis software. Existing signal timing used in the analysis was provided by the City of Kirkland and WSDOT.

The 2015 existing AM and PM peak hour LOS analysis results for the study intersections are summarized in **Table 3**. The 2015 existing LOS worksheets are included in **Appendix B**.

Table 3
2015 Existing Peak Hour Level of Service Summary

Study Intersection	AM Peak Hour		PM Peak Hour	
	LOS ¹	Delay (sec)	LOS ¹	Delay (sec)
<u>Signalized:</u>				
1) NE 128 th St / Totem Lake Blvd	B	12.1	C	29.2
2) Totem Lake Blvd / 120 th Ave NE / I-405 NB Ramps	B	17.8	C	24.7
3) NE 128 th St / 120 th Ave NE	D	35.3	D	40.9
<u>Two-Way Stop Controlled:</u>				
4) Totem Lake Way / 120 th Ave NE				
Eastbound Left/Thru/Right	C	15.0	D	26.5
Westbound Left/Thru/Right	C	17.0	F	59.2
Northbound Left	A	8.0	A	8.5
Southbound Left	A	8.3	A	9.0

- 1) LOS = Level of Service, reported by movement for unsignalized intersections.
2) LOS for intersection 3 was reported based on HCM 2000 methodology using the Synchro 8 software program.

As shown in **Table 3**, the signalized study intersections operate at LOS D or better under 2015 existing conditions during both the AM and PM peak hours. Additionally, all controlled movements at the unsignalized study intersection of Totem Lake Way/120th Ave NE operate at LOS D or better under 2015 AM and PM peak hour conditions, with the exception of the westbound shared left/thru/right movement which currently operates at LOS F during the PM peak hour.

Collision History

Collision data at the study intersections were summarized for the three-year period from 2012 to 2014. Collision data was provided by the City of Kirkland. The collision data is included in **Appendix C**. Summaries of the total by year, annual average, and collisions per million entering vehicles (MEV) are provided in **Table 4**.

Table 4
Collision Data Summary, January 1, 2012 to December 31, 2014

Study Intersections	2012 Collisions	2013 Collisions	2014 Collisions	Average Annual Collisions	Average Collisions / MEV ¹
1) NE 128 th St / Totem Lake Blvd	9	12	10	10.33	0.60
2) 120 th Ave NE / Totem Lake Blvd	6	9	7	7.33	0.62
3) NE 128 th St / 120 th Ave NE	4	5	9	6.00	0.32
4) Totem Lake Way / 120 th Ave NE	0	2	1	1.00	0.08

- 1) MEV = Million Entering Vehicles. Rates reported are the average of the most recent 3-year period.
Collision data provided by the City of Kirkland.

FUTURE WITHOUT-PROJECT CONDITIONS

Future Traffic Volumes With 120th Ave NE Redistribution

In conjunction with the Village at Totem Lake project, 120th Ave NE is proposed to be altered along the project frontage to include on-street parking, multiple pedestrian crossings between the lower and upper mall, a traffic signal, and multiple project access driveways. The proposed “traffic calming” measures on 120th Ave NE would result in increased travel times on 120th Ave NE. As a result, a portion of the vehicular through traffic that currently uses 120th Ave NE would likely shift to use Totem Lake Boulevard or other City streets.

In order to estimate the redistribution of background traffic associated with the planned traffic calming on 120th Ave NE, the existing Totem Lake Mall trips at the study intersections were subtracted from the 2015 existing peak hour traffic volumes (see **Figure 3**) at the study intersections to estimate 2015 existing peak hour traffic volumes without the Totem Lake Mall. This existing Mall trip generation includes trips associated with the Chase bank in the upper mall that is not a part of the Totem Lake Mall redevelopment area but shares access with the Mall under existing conditions. The estimated peak hour trips associated with the Chase bank were assumed to remain and were assigned to a new separate access driveway on Totem Lake Way and the shared garage access driveway on 120th Ave NE. The estimated 2015 AM and PM peak hour traffic volumes without the Totem Lake Mall are illustrated in **Figure 4**.

Future year 2017 Baseline AM and PM peak hour traffic volumes were estimated by applying a 2 percent annual growth rate to the 2015 existing volumes without Totem Lake Mall (see **Figure 4**) and including pipeline project trips provided by the City of Kirkland. The 2017 Baseline AM and PM peak hour traffic volumes at the study intersections are illustrated in **Figure 5**. It should be noted that the 2017 Baseline peak hour traffic volumes represent a scenario with the existing Totem Lake Mall vacated.

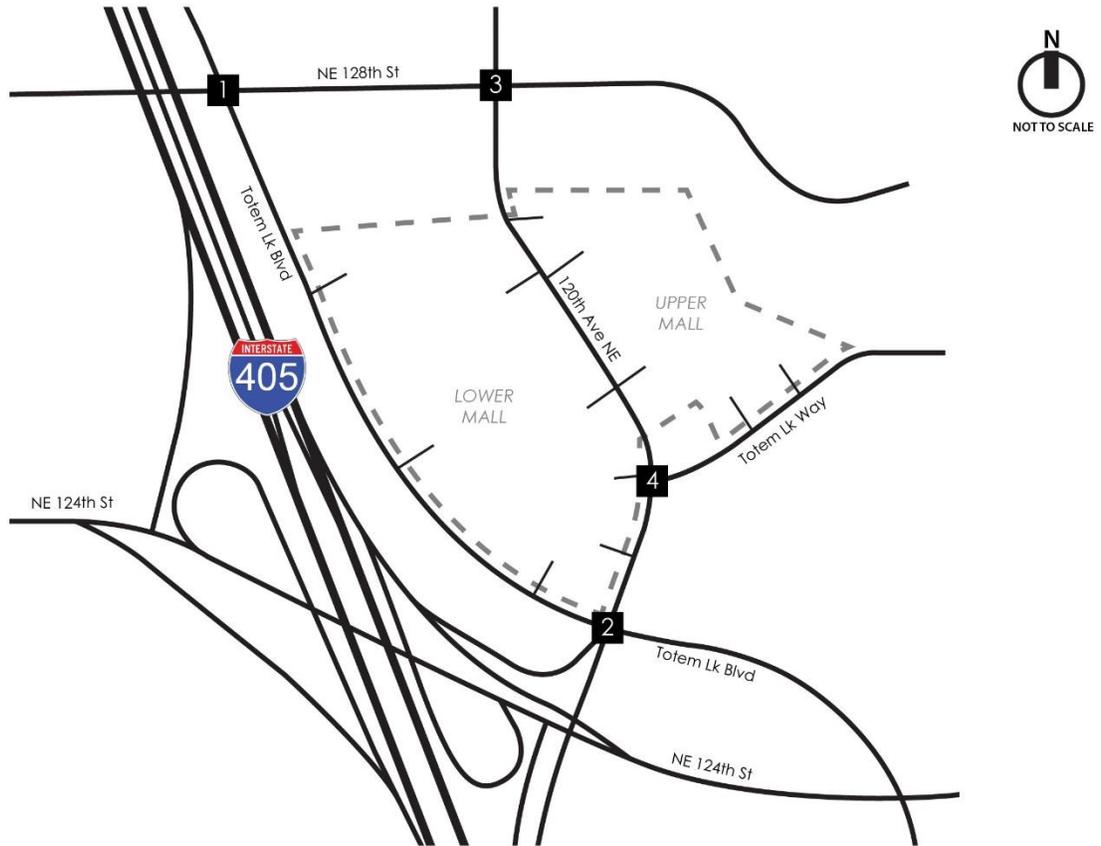

The 2017 Baseline AM and PM peak hour traffic volumes (**Figure 5**) were used to estimate the redistribution of background traffic from 120th Ave NE as a result of the planned traffic calming on 120th Ave NE as a part of the Village at Totem Lake development project. It was estimated that 50 percent of the northbound AM and PM peak hour background volume on 120th Ave NE would shift to northbound Totem Lake Boulevard. It was also estimated that 10 percent of the southbound AM and PM peak hour background volume on 120th Ave NE would shift off of 120th Ave NE, with 5 percent shifting to southbound Totem Lake Boulevard and the remaining 5 percent shifting to other roadways that were not included in this analysis. There is less southbound traffic that is expected to shift from 120th Ave NE to Totem Lake Boulevard because of the westbound left-turn restriction at the intersection of NE 128th Street/Totem Lake Boulevard (study intersection #1). The AM and PM peak hour traffic volume redistribution with the 120th Ave NE traffic calming is included in **Appendix D**. The year 2017 Baseline Adjusted AM and PM peak hour volumes with the redistribution of traffic from 120th Ave NE are illustrated in **Figure 6**.

FUTURE WITH PROJECT CONDITIONS

Project Trip Generation

The net new trips associated with the Village at Totem Lake development were determined by estimating the total trips from the proposed project and then subtracting out the trips generated by the existing Totem Lake Mall.

Existing Use:

To determine the number of trips generated by the existing Mall, peak period traffic counts were conducted at the existing driveways on Tuesday, September 15, 2015. Pass-by trips associated with the existing Mall were estimated based on methodology documented in the ITE *Trip Generation Handbook*, 3rd Edition, and subtracted from the total driveway counts to result in the net trip generation for the existing Mall. The existing Totem Lake Mall generates 375 net trips (224 in, 151 out) during the AM peak hour and 927 net trips (445 in, 482 out) during the PM peak hour. The detailed trip generation calculations for the existing Totem Lake Mall are included in **Appendix A**.

Proposed Use:

The proposed Village at Totem Lake development includes 342,700 square feet (sf) shopping center use, a 50,000 sf grocery store, 1,050 apartments, and an 800 seat multiplex theatre.

The trip generation estimates for the proposed uses were based on methodology documented in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition for Land Use Code (LUC) 820 (Shopping Center), LUC 850 (Grocery), LUC 220 (Apartments), and LUC 444 (Movie Theatre with Matinee).

Internal trips and pass-by trips were estimated based on the methodology documented in the ITE *Trip Generation Handbook*, 3rd Edition. The resulting net (without trip credit for existing uses) weekday daily, AM and PM peak hour trip generation for the proposed Village at Totem Lake project is summarized in **Table 5**. The detailed trip generation calculations are included in **Attachment E**.

Table 5
Project Net Trip Generation Summary

Time Period	Proposed Net Trips Generated		
	In	Out	Total
Weekday Daily	8,838	8,837	16,675
AM Peak Hour	374	578	952
PM Peak Hour	691	504	1,195

As shown in **Table 5**, the proposed Village at Totem Lake development is estimated to generate a total of 16,675 net weekday daily trips with 952 net trips occurring during the weekday AM peak hour (374 entering, 578 exiting), and 1,195 net trips occurring during the weekday PM peak hour (691 entering, 504 exiting).

Comparison to Previous 2005 TIA

In the 2005 TIA for the Totem Lake Mall Redevelopment, the trip generation estimates were summarized in terms of “External Trips” which are the total driveway trips (net new trips plus pass-by trips). **Table 6** includes a summary of the trip generation estimate for the Totem Lake Mall site documented in the 2005 TIA and the trip generation estimate for the current land use proposal in terms of “External Trips.” The detailed trip generation comparison is included in **Appendix F**.

Table 6
Trip Generation Comparison to 2005 TIA

Land Use	Weekday Daily Trips	Weekday AM Peak Hour Trips			Weekday PM Peak Hour Trips		
		In	Out	Total	In	Out	Total
2005 TIA ¹							
Total Trips	27,667	518	290	808	1,142	1,408	2,550
<i>Internal Trips</i>	<i>(4,002)</i>	<i>(7)</i>	<i>(7)</i>	<i>(14)</i>	<i>(156)</i>	<i>(157)</i>	<i>(313)</i>
Net External Trips	23,665	511	283	794	986	1,251	2,237
CURRENT PROPOSAL							
Total Trips	27,146	418	608	1,026	1,312	1,172	2,484
<i>Internal Trips</i>	<i>(2,984)</i>	<i>(6)</i>	<i>(6)</i>	<i>(12)</i>	<i>(280)</i>	<i>(280)</i>	<i>(560)</i>
Net External Trips	24,162	412	602	1,014	1,032	892	1,924

1) Totem Lake Mall Redevelopment Traffic Impact Analysis, December 23, 2005.

As shown in **Table 6**, the current land use proposal for the Village at Totem Lake is estimated to generate 313 fewer trips (14 percent less) during the PM peak hour when compared to the PM peak hour trip generation estimate documented in the 2005 TIA, which is the trip generation that SEPA is based on.

Future Driveway Configuration

With the proposed Village at Totem Lake project, the three existing driveways to the lower mall on Totem Lake Boulevard would remain in their current location and the existing middle driveway would be signalized to connect to the new “Central Driveway” through the site. The driveways on Totem Lake Boulevard would provide access to the lower mall surface parking.

The driveways on 120th Ave NE are proposed to be relocated and reconfigured with the proposed project. A total of 6 driveways are proposed on 120th Ave NE (see **Figure 2** for location of proposed driveways described below):

#8: 120th Ave NE/Upper Mall Loop Road/Lower Mall Service Driveway – provides unsignalized access to upper mall loop road/parking garage for residential and retail uses and also provides access to lower mall for service/loading

#9: 120th Ave NE/Lower Mall Garage Driveway – provides unsignalized access to lower mall parking garage for residential and retail uses

#10: 120th Ave NE/Lower Mall Central Driveway – provides signalized access to the lower mall surface parking

#11: 120th Ave NE/Upper Mall Garage Driveway/Lower Mall Service Driveway – provides unsignalized access to upper mall parking garage for retail uses and also provides service/loading access to the lower mall

#12: 120th Ave NE/Lower Mall South Driveway – provides unsignalized access to the lower mall surface parking

Additionally, three unsignalized driveways are proposed on Totem Lake Way (see **Figure 2**):

#13: Totem Lake Way/West Driveway – provides unsignalized access to the upper mall garage for retail use only

#14: Totem Lake Way/East Driveway – provides unsignalized access to the upper mall garage for residential use only

#15: Totem Lake Way/Loop Road – provides unsignalized access to the upper mall loop road for residential use only

All driveways to the lower and upper mall on Totem Lake Boulevard, 120th Ave NE, and Totem Lake Way are proposed to provide full access.

Project Trip Distribution and Assignment

The City of Kirkland provided a PM peak hour project trip distribution for the Village at Totem Lake site on October 8, 2015 using the Bellevue-Kirkland-Redmond (BKR) traffic model. The overall trip distribution was used to estimate the project trip distribution for the two specific mall areas (upper mall and lower mall). The estimated project trip distribution for the lower mall area is illustrated in **Figure 7** and the project trip distribution for the upper mall area is illustrated in **Figure 8**.

The assignment of new project trips at the site driveways was based on the proposed land use anticipated to use each individual driveway and the proposed driveway access locations.

The assignment of pass-by project trips for the proposed project was determined based on the background traffic volumes on Totem Lake Boulevard and 120th Ave NE (after accounting for the shift in traffic from 120th Ave NE as a result of traffic calming on 120th Ave NE (see **Figure 6**)).

The AM and PM peak hour project trip assignment (new trips and pass-by trips) at the study intersections and site driveways for the proposed Village at Totem Lake development are illustrated in **Figure 9** and **Figure 10**, respectively. **Appendix G** includes figures that illustrate the net new inbound trip assignment, the net new outbound trip assignment, and the pass-by trip assignment separately for both the AM and PM peak hours.

Future With-Project Traffic Volumes

To estimate future year 2017 peak hour traffic volumes with the proposed project, the project trip assignment (shown in **Figures 9 and 10**) was added to the 2017 Baseline Adjusted traffic volumes (shown in **Figure 6**) to result in the 2017 With Project peak hour traffic volumes. The 2017 With Project AM and PM peak hour traffic volumes at the study intersections are shown in **Figure 11**. The 2017 With-Project AM and PM peak hour traffic volumes at the site driveways are shown in **Figure 12**.

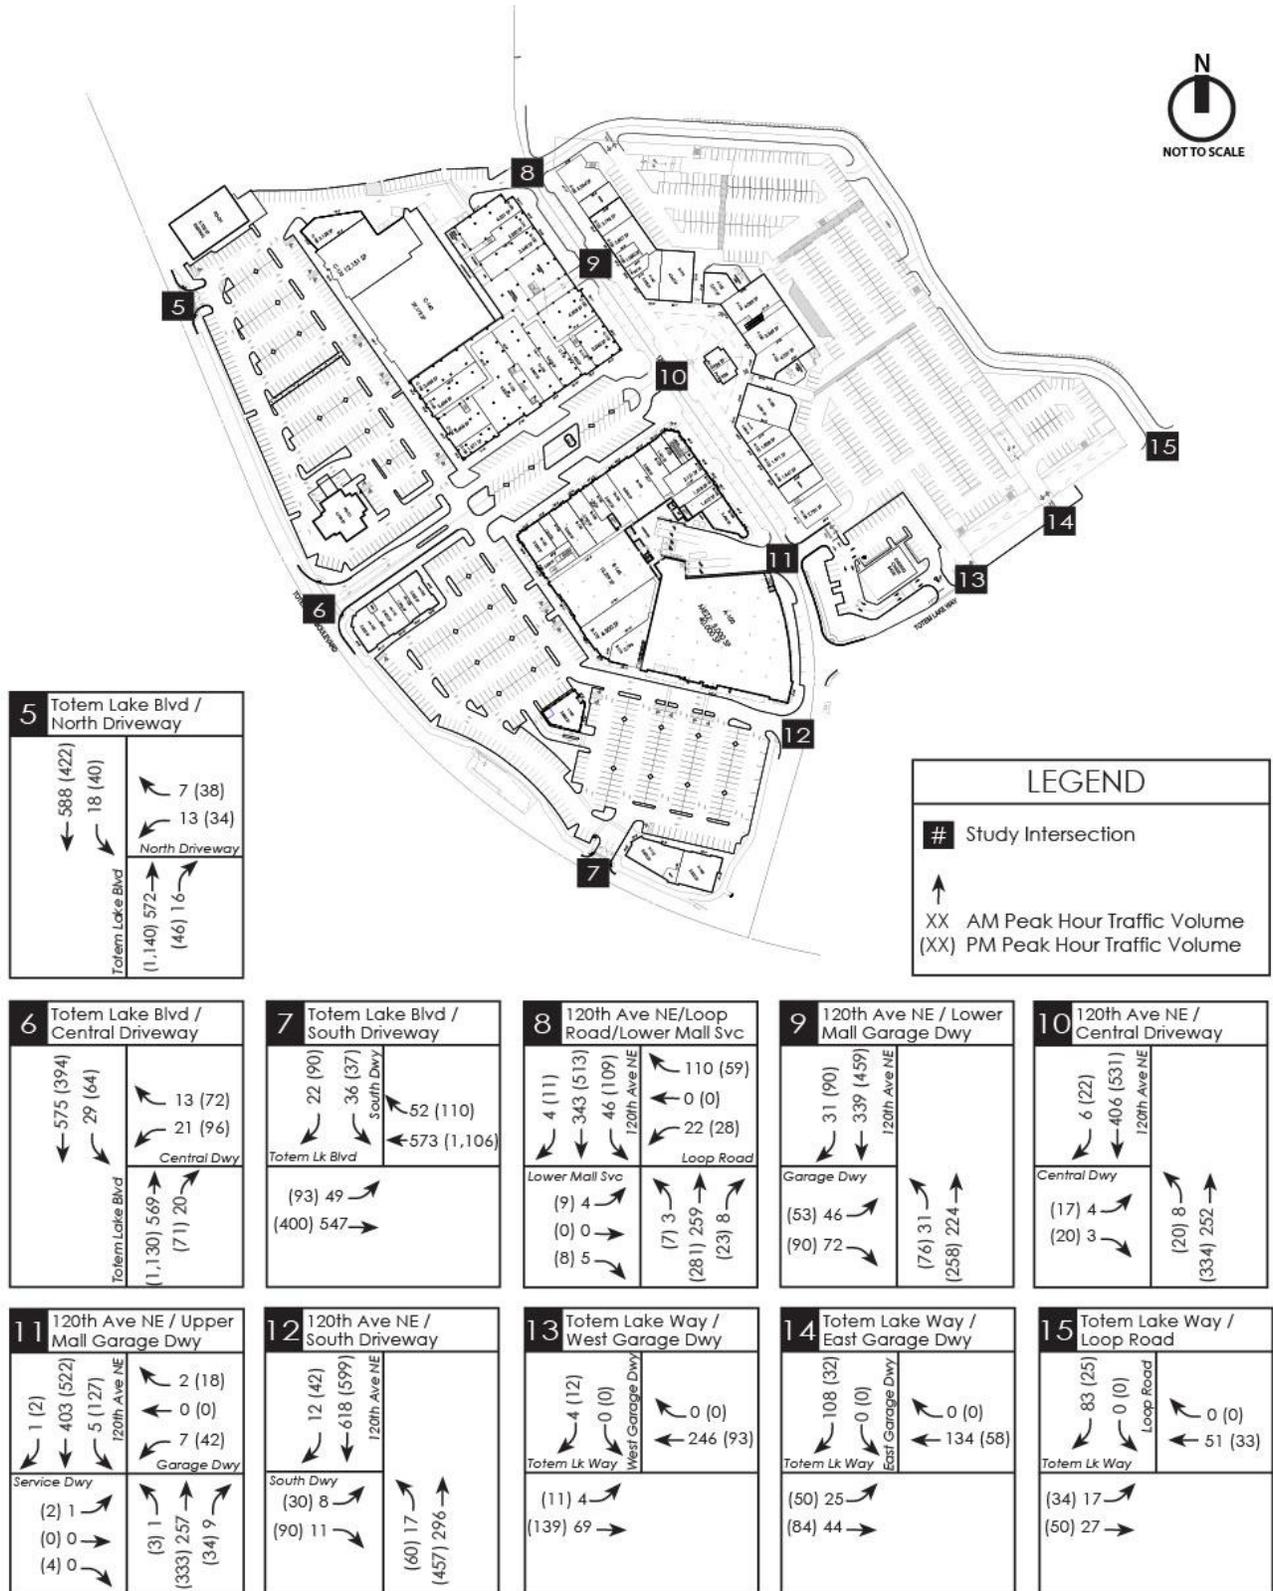

Figure 12: Year 2017 With-Project Peak Hour Traffic Volumes at Site Driveways

Level of Service

A Level of service (LOS) analysis was conducted at the four study intersections for future year 2017 With Project conditions.

The roadway network assumed in the year 2017 LOS analysis was based on existing intersection geometry at the signalized study intersections (#1-3). Signal timing at the signalized study intersections were assumed to be the same as existing conditions. At study intersection #4 (Totem Lake Way/120th Ave NE), the intersection was assumed to be a three-leg intersection with a southbound left-turn lane and remain as two-way stop controlled for the 2017 LOS analysis.

The 2017 weekday AM and PM peak hour LOS results with the project at the study intersections are summarized in **Table 7**. The LOS worksheets are included in **Appendix B**.

Table 7
Year 2017 With Project Peak Hour Level of Service Summary at Study Intersections

Study Intersection	AM PEAK HOUR		PM PEAK HOUR	
	LOS ¹	Delay (sec)	LOS ¹	Delay (sec)
<u>Signalized:</u>				
1) NE 128 th St / Totem Lake Blvd	B	13.8	D	38.2
2) Totem Lake Blvd / 120 th Ave / I-405 NB	C	20.8	D	40.7
3) NE 128 th St / 120 th Ave NE ²	D	49.5	E	73.2
<u>Two-Way Stop Controlled:</u>				
4) Totem Lake Way / 120 th Ave NE				
Westbound Left	C	21.5	C	22.7
Westbound Right	B	10.5	B	12.8
Southbound Left	A	8.1	A	8.9

1) LOS = Level of Service, reported by movement for unsignalized intersections.

2) LOS for intersection 3 was reported based on HCM 2000 methodology using the Synchro 8 software program.

As shown in **Table 7**, the signalized study intersections are estimated to operate at LOS D or better during the AM and PM peak hours in 2017 with the proposed project, except for the intersection of NE 128th Street/120th Ave NE which is anticipated to operate at LOS E in 2017 during the PM peak hour with the project. The intersection of NE 128th Street/120th Ave NE is anticipated to operate at LOS E during the PM peak hour in 2017 primarily as a result of the redistribution of background traffic from 120th Ave NE that results in a higher demand for eastbound left-turns at the intersection. Additionally, all controlled movements at the unsignalized study intersection of Totem Lake Way/120th Ave NE would operate at LOS C or better under 2017 AM and PM peak hour conditions with the proposed project.

Table 8 provides a summary of the current With-Project PM peak hour level of service results compared to the PM peak hour With-Project level of service as documented in the 2005 TIA for the Totem Lake Mall Redevelopment. There was no AM peak hour level of service reported in the 2005 TIA so a With-Project level of service comparison cannot be made for the AM peak hour.

Table 8
PM Peak Hour Level of Service Comparison to 2005 TIA

Study Intersection	PM PEAK HOUR			
	2011 With Project (from 2005 TIA)		2017 With Project (current proposal) ²	
	LOS ¹	Delay (sec)	LOS ¹	Delay (sec)
<u>Signalized:</u>				
1) NE 128 th St / Totem Lake Blvd	D	43.3	D	38.2
2) Totem Lake Blvd / 120 th Ave / I-405 NB	E	66.6	D	37.1
3) NE 128 th St / 120 th Ave NE	C	29.3	E	73.2
4) Totem Lake Way / 120 th Ave NE ³	C	25.8	--	--
<u>Two-Way Stop Controlled:</u>				
4) Totem Lake Way / 120 th Ave NE	--	--		
Westbound Left/Right	--	--	C	23.2
Southbound Left/Thru	--	--	A	8.9

- 1) LOS = Level of Service, reported by movement for unsignalized intersections.
- 2) LOS for intersection 3 was reported based on HCM 2000 methodology using the Synchro 8 software program.
- 3) 2005 TIA assumed intersection to be signalized.

As shown in **Table 8**, the signalized study intersection of Totem Lake Blvd/120th Ave NE (#2) is anticipated to operate at a better LOS (LOS D vs. LOS E) during the PM peak hour in 2017 with the project than was estimated in the 2005 TIA. The signalized study intersection of NE 128th St/120th Ave NE (#3) is anticipated to operate at a worse LOS (LOS E vs. LOS C) during the PM peak hour than was estimated in the 2005 TIA. The intersection of NE 128th Street/120th Ave NE is anticipated to operate at LOS E during the PM peak hour in 2017 primarily as a result of the redistribution of background traffic from 120th Ave NE that results in a higher demand for eastbound left-turns at the intersection.

Site Access Analysis

A level of service (LOS) analysis was conducted at the proposed project site access driveways for future year 2017 With-Project conditions. The 2017 With-Project AM and PM peak hour volumes at the site driveways used in the LOS analyses are as shown on **Figure 12**.

Table 9 summarizes the results of the LOS analysis for 2017 With Project conditions at the site driveways. The LOS worksheets are included in **Appendix B**.

**Table 9
Year 2017 With Project Peak Hour Level of Service Summary at Site Driveways**

Driveway Location	AM PEAK HOUR		PM PEAK HOUR	
	LOS ¹	Delay (sec)	LOS ¹	Delay (sec)
<u>Signalized:</u>

13) Totem Lake Way / West Garage Driveway				
Southbound left-right (exiting)	A	9.9	A	9.3
Eastbound left/thru (entering)	A	7.8	A	7.5
14) Totem Lake Way / East Garage Driveway				
Southbound left-right (exiting)	A	9.8	A	9.2
Eastbound left/thru (entering)	A	7.6	A	7.5
15) Totem Lake Way / Loop Road				
Southbound left-right (exiting)	A	9.1	A	9.0
Eastbound left/thru (entering)	A	7.4	A	7.4

1) LOS = Level of Service, reported by movement for unsignalized intersections.

2) LOS for driveway # 11 was reported based on HCM 2000 methodology using the Synchro 8 software program

As shown in **Table 9**, the results of the AM peak hour LOS analysis show that the signalized site driveways and all controlled movements at the unsignalized site driveways are expected to operate

at LOS C or better in 2017 during the AM peak hour with the proposed Village at Totem Lake project.

As also shown in **Table 9**, the results of the PM peak hour LOS analysis show that the signalized site driveways and all controlled movements at the unsignalized site driveways are anticipated to operate at LOS D or better during the PM peak hour in 2017 with the proposed Village at Totem Lake project, with the exception of the westbound left/thru at 120th Ave NE/Upper Mall Loop Road (#8) which is anticipated to operate at LOS E. Vehicles exiting the site onto 120th Ave NE from the unsignalized Upper Mall Loop Road driveway (#8) may shift to exit at 120th Ave NE/Totem Lake Way (intersection #4).

MITIGATION

Concurrency

Based on correspondence with the City of Kirkland, the proposed project obtained concurrency with the 2005 Totem Lake Mall Redevelopment proposal and the concurrency is vested.

SEPA Improvements

Per the SEPA Addendum issued for the project on February 26, 2015, "*the need for, extent, and/or design of some potential improvements, such as intersection improvements, will depend on decisions regarding access to the site which will be made subsequently by the applicant, Public Works Department, and the Design Review Board.*"

The following improvements are proposed to be completed as part of the Village at Totem Lake project:

- Redesign 120th Ave NE along the project frontage to include on-street parking and other traffic calming measures
- Install traffic signal at Totem Lake Boulevard/Central Driveway
- Install traffic signal at 120th Ave NE/Central Driveway

In addition, it is recommended that the City consider optimizing the peak hour signal timing at the intersection of NE 128th Street/120th Ave NE to improve the operations of the intersection with the redistribution of background traffic from 120th Ave NE.

Notes:

¹ GFA is Gross Floor Area, GLA is Gross Leasable Area, DU is Dwelling Unit.

² Institute of Transportation Engineers, Trip Generation Manual, 9th Edition, 2012 Land Use Codes.

³ Internal trip reductions based on methodology documented in the ITE Trip Generation Handbook, 3rd Edition, August 2014 (used average of AM and PM percentages for Daily).

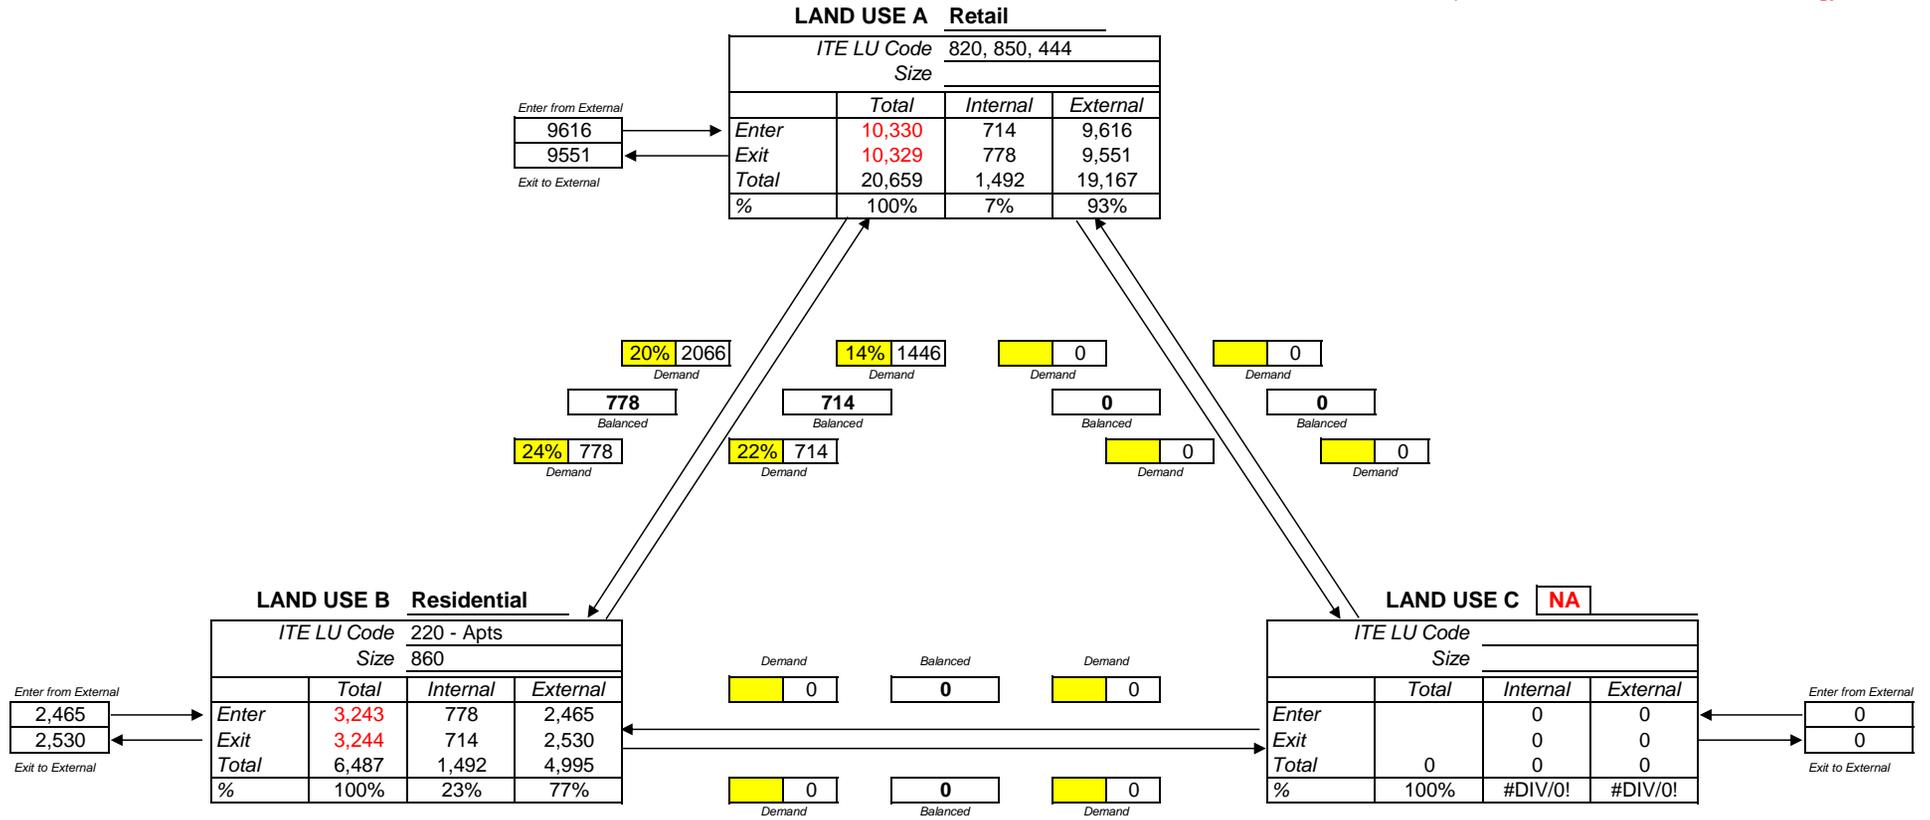

⁴ Passby percent for weekday daily assumed to be the same as PM peak hour passby.

⁵ The weekday daily rate for the movie theatre was calculated based on the ratio of Friday daily to Friday PM peak of adjacent street rates per movie screen (348.33/45.91) multiplied by the weekday PM peak of adjacent street rate per seat (0.07).

Notes:

¹ GFA is Gross Floor Area, GLA is Gross Leasable Area, DU is Dwelling Unit.

² Institute of Transportation Engineers, Trip Generation Manual, 9th Edition, 2012 Land Use Codes.

³ Internal trip reductions based on methodology documented in the ITE Trip Generation Handbook, 3rd Edition, August 2014.

⁴ Passby percent for AM Peak Hour assumed to be 0%, to be conservative.

⁵ Passby percent for AM Peak Hour assumed to equal to PM peak pass-by percentage (36%).

⁶ The AM peak trip rate for the movie theatre was calculated based on the ratio of the Weekday AM peak of adjacent street rate per seat (0.01) to the Weekday PM peak of adjacent street rate per seat (0.07) for LUC 443 (Movie Theatre without Matinee) multiplied by the Weekday PM peak of adjacent street rate per seat for LUC 444 (0.07).
